what a collision is

0	1	9
3	4	2
6	7	5

distinct sums

0	1	6
2	3	8
9	0	5

one collision

$d = a_{s'} - a_s = b_t - b_{t'}$

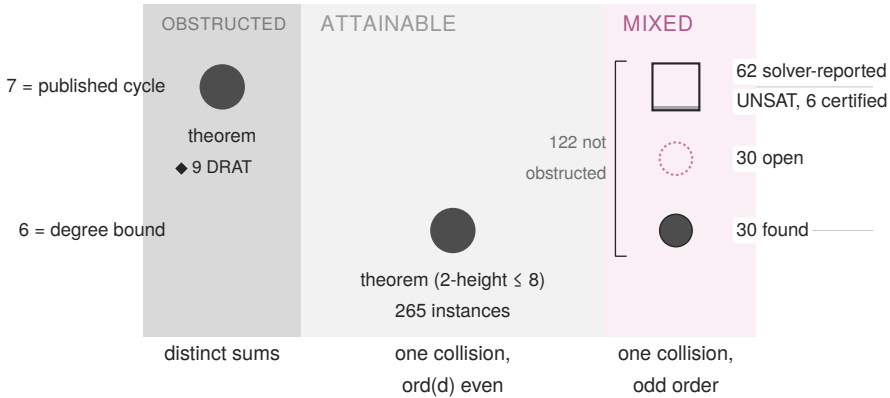
overlap 2 per pair

→ overlap 4 on one orbit

- fill: settled
- outline only: solver
- dotted: open
- ◆ DRAT-verified

minimum depth of a proper schedule

211 excluded by mod-4



C2 and subgroup-type instances: Supplementary Table S9

counts from 664 tested instances; the two theorem columns hold for their whole class, the third does not
